Education

Howard University **Graduated May 2026**
Bachelor of Science in Computer Science *Washington, DC*

Experience

Software Engineer Intern **May 2025 – Sep 2025**
LucidTrade LLC *Auburn, AL*

- Built an automated pipeline that ingests and ranks 1,000+ equities, futures, and options tickers in under 20 minutes, replacing manual spreadsheet screening as a first-pass filter for Portfolio Managers allocating capital.
- Wrote Python modules applying PCA and ARIMA to OpenBB market data and SEC EDGAR filings to support risk assessment and trade idea generation.
- Built "FitScore," an LLM agent that scores each asset 0–100 with a written rationale from market data, ARIMA metrics, and factor exposures, plus a Dash dashboard on Parquet and DuckDB for fast factor analytics and rankings.
- Delivered the pipeline and FitScore dashboard in two-week agile sprints with sprint planning and daily standups.

Google Tech Exchange Scholar **Jan 2024 – Jun 2024**
Google *Mountain View, CA*

- Selected as one of 170 scholars nationwide for Google's 6-month Tech Exchange program, receiving live coding instruction and direct code reviews from Google engineers.
- Co-authored the PRD and design prototype for FitBeat, a workout app concept matching music tempo to the user's pace; defined personas and P0/P1 requirements for a 4-person team.

Projects

Amazon FTR Smart Return Inspection System | *TypeScript, Supabase, AI Vision* **May 2026**

- Built a working hardware-integrated prototype for my senior capstone: Kinova robotic arms and AI vision connected to a Supabase backend to inspect returned items and display results in a UI. Demonstrated end to end on real hardware; placed 4th among all senior capstone teams.
- Wrote a typed TypeScript utility that converts raw hardware confidence scores into UI statuses, with validation so anomalous sensor readings never fail silently.

VibeCast: AI Music Recommender | *React, Node.js, Express, Spotify API, Gemini API* **June 2025**

- Built and deployed a full-stack web app that sends 50+ Spotify playlist tracks to the Gemini API and returns mood-based song and activity recommendations in under 2 seconds.
- Built the Node.js/Express backend with Spotify OAuth 2.0 (95%+ cover art retrieval by searching track name plus artist) and a responsive React frontend.

Spotsy: Local Discovery App | *Python, BigQuery, PostgreSQL, Places API, Gemini API* **July 2024**

- Built a local recommendation app on the Google Places and Gemini APIs; cut search latency 35% with optimized BigQuery calls and improved query performance 40% with PostgreSQL indexing.

Technical skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java, HTML, CSS
Frameworks & Architecture: React, Node.js, Express, REST APIs, Dash, JUnit, Agile/Scrum
AI / LLM: Gemini API, Claude, Cursor, ChatGPT, Google Antigravity
Data & Tools: Git, Docker, Google BigQuery, DuckDB, Parquet, PostgreSQL, Supabase, Pandas, OpenBB, Linux, Unix, VS Code, Netlify, AWS (Certified Cloud Practitioner, Apr 2025)

Extracurriculars

CodeHouse Scholar **Aug 2022 – May 2026**

- Selected for a 4-year tech leadership program connecting HBCU talent with top tech companies.
